Irish Stamp 1G (Graduate Permission) — eligible for full-time employment

SUMMARY

Full Stack Developer with 3+ years of production experience building ASP.NET Core web applications, REST APIs, and microservices in C# across healthcare and logistics. Delivered enterprise-scale systems serving 150+ hospitals and global shipping clients (Maersk), applying SOLID principles, TDD, and Entity Framework Core. Experienced with SQL Server, Angular, React, CI/CD, and Agile/Scrum delivery. MSc in Data Science and Analytics, First Class Honours (MTU, 2026). Eligible to work full-time in Ireland on Stamp 1G.

TECHNICAL SKILLS

Backend: C#, ASP.NET Core, ASP.NET MVC, Entity Framework Core, REST APIs, Microservices, Node.js, Express.js, FastAPI

Frontend: Angular, React, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, RxJS

Databases: SQL Server, PostgreSQL, MySQL, MongoDB

Testing & Standards: TDD, Unit Testing, SOLID principles, clean code, Jasmine, Karma

DevOps & Tools: CI/CD, GitHub, Azure DevOps, Docker, Git, Agile/Scrum, Jira

Other: Python (pandas, NumPy, scikit-learn), Power BI, technical mentoring, GDPR/data privacy

WORK EXPERIENCE

Full Stack Developer · Cydez Technologies, India · *Hybrid* · January 2025 – July 2025

- Designed and built REST APIs for shipment creation, status tracking, and warehouse inventory using ASP.NET Core and Entity Framework Core within a microservices architecture serving Maersk and global enterprise clients; APIs processed thousands of daily transactions.
- Refactored LINQ and Entity Framework Core queries across delivery, warehouse, and shipment modules, reducing data-access latency across core operational reads; applied SOLID principles and clean code practices throughout.
- Shipped Angular UI features integrated with backend microservices across multiple sprint cycles; conducted code reviews for junior developers in a 20-person Agile/Scrum team.
- Automated build and deployment using CI/CD pipelines (GitHub Actions, Docker) and contributed to Azure DevOps pipeline configuration, improving deployment consistency across environments.

Software Engineer · Kameda Infologics, India · *Hybrid* · October 2022 – September 2024

- Developed backend microservices with ASP.NET Core and C# across patient management, scheduling, and records modules, serving 150+ hospitals in India and the Middle East under healthcare compliance requirements.
- Optimised PostgreSQL queries on the patient scheduling module, reducing booking and rescheduling response times from over 10 seconds to under 1 second during peak hours (10x improvement) on a live clinical platform.
- Built and maintained analytics dashboards and reports surfacing operational data for clinical and administrative stakeholders, ensuring metric consistency across reporting surfaces.
- Wrote unit tests using Jasmine and Karma across core modules; mentored incoming developers and contributed to sprint planning, code reviews, and retrospectives across multiple Agile teams.

Software Engineer & Training Assistant · Luminar Technolab, India · *On-site* · November 2021 – October 2022

- Led 3 of 5 production releases on a 5-person team building outsourced clinical workflow applications, coordinating across testing and UI/UX to ship Angular and REST API features for healthcare clients.
- Deployed and maintained Linux-based application servers — managing SSH access, configuring reverse proxies, and diagnosing process, networking, and file-system issues in production environments.
- Delivered full-stack training to batches of 60 students covering HTML, CSS, JavaScript, TypeScript, Angular, React, and Node.js as part of a formal company programme.

EDUCATION

MSc in Data Science and Analytics · Munster Technological University, Cork, Ireland · *September 2025 – September 2026*

First Class Honours (1.1) · Modules: Data Mining and Statistical Modelling · Applied Machine Learning · Multivariate Modelling · Practical Data Management · Scientific Programming in Python

B.Tech in Mechanical Engineering · SCMS School of Engineering and Technology, India · *January 2017 – January 2021*

GPA: 8.05 / 10

PROJECTS

Medical Claims AI Platform *Personal Project · React · ASP.NET Core · PostgreSQL · FastAPI · Docker*

- Architected a full-stack analytics platform for medical document analysis: React frontend, ASP.NET Core API, PostgreSQL, and a FastAPI Python backend with LLM-based document understanding, deployed via Docker with CI/CD.
- Designed ETL pipeline to ingest and normalise unstructured medical claim documents into a structured PostgreSQL schema, with row-level access controls and data-integrity validation before each report surface.

UAV Battery Power Prediction *MSc Research Thesis · Python · scikit-learn · XGBoost · LSTM*

- Built an end-to-end ML pipeline for short-term UAV energy prediction using real PX4 flight telemetry; processed large-scale time-series data through feature selection, PCA, and model benchmarking (Random Forest, XGBoost, LSTM, Bi-LSTM, Autoencoder).

MCP Server for Internal Analytics Tooling *Personal Project · Python · FastAPI · Claude Code*

- Built a Model Context Protocol (MCP) server exposing internal data endpoints to AI coding tools, enabling agentic Claude Code sessions to query analytics results and generate dashboard code directly from live data.

Semiconductor Fault Detection *ML Project · Python · scikit-learn · SMOTE · PCA*

- Applied PCA and SMOTE on the SECOM manufacturing dataset; benchmarked k-NN, Decision Tree, and SVM classifiers with validated accuracy metrics against source data.

CERTIFICATIONS

- Supervised Machine Learning: Regression and Classification — Coursera / DeepLearning.AI
- MEARN Stack Web Development — National Council for Technology and Training, India
- AWS Certified Machine Learning – Specialty (in progress, target December 2026)
