PROFESSIONAL SUMMARY

Data analyst and full stack developer with 3+ years of experience building production data pipelines, REST APIs, and analytics dashboards for global enterprise clients including Maersk and 150+ hospitals across India and the Middle East. Proficient in Python, SQL, Power BI, Tableau, and PostgreSQL, with a strong record of auditing large datasets, improving data quality, and communicating findings to non technical stakeholders. MSc in Data Science and Analytics (First Class Honours, MTU 2026) covering data mining, statistical modelling, and anomaly detection. Experienced in Agile project management, structured requirements gathering, and delivering end to end analytics solutions across regulated industries.

KEY SKILLS

Data and Analytics: Python (Pandas, NumPy), SQL (PostgreSQL, SQL Server), Power BI, Tableau, dbt, Apache Airflow, Apache Kafka

Financial and BI: Revenue analysis, cost allocation reporting, pricing and volume datasets, cross border logistics metrics

Programming: Python, TypeScript, JavaScript, C#, SQL

Data Infrastructure: PostgreSQL, MongoDB, REST APIs, Docker, GitHub Actions CI/CD, Azure DevOps

Practices: Requirements gathering, stakeholder workshops, automated reporting, technical documentation

Methodology: Agile/Scrum, sprint planning, backlog refinement, code review, technical mentoring

WORK EXPERIENCE

Full Stack Developer | Cydez Technologies, India | *January 2025 to July 2025*

- Designed and built REST APIs for shipment creation, real time status tracking, and warehouse inventory within a microservices architecture serving Maersk and enterprise logistics clients; APIs processed thousands of daily transactions.
- Reduced data access latency across delivery, warehouse, and shipment modules by refactoring PostgreSQL and Entity Framework Core queries; applied clean code and separation of concerns principles throughout.
- Automated CI/CD pipelines using GitHub Actions and Docker; contributed to Azure DevOps configuration for a 20 person Agile/Scrum team.
- Reviewed code and mentored junior developers; participated in sprint planning and backlog refinement.

Software Engineer | Kameda Infologics, India | *October 2022 to September 2024*

- Built analytics dashboards for clinical and administrative stakeholders across 150+ hospitals; gathered requirements through structured workshops and translated them into automated reports.
- Optimised PostgreSQL queries on the live patient scheduling module, reducing response times from over 10 seconds to under 1 second on a high concurrency platform.
- Developed backend microservices in ASP.NET Core and C# across patient management, clinical scheduling, and records modules under healthcare compliance requirements.
- Authored unit tests using Jasmine and Karma and supported integration testing across multiple Agile teams to maintain data quality.

Software Engineer | Luminar Technolab, India | *November 2021 to October 2022*

- Led 3 of 5 production releases on a 5 person team delivering clinical workflow applications; managed Linux server deployments including SSH, reverse proxies, and production diagnostics.
- Delivered full stack technical training to cohorts of 60 students covering Angular, React, TypeScript, Node.js, and REST APIs, communicating complex technical concepts clearly to a non specialist audience.

EDUCATION

MSc in Data Science and Analytics | Munster Technological University, Cork | *September 2025 to September 2026*

- First Class Honours (1.1)
- Modules: Data Mining, Applied Machine Learning, Statistical Modelling, Anomaly Detection, Scientific Programming in Python

BTech in Mechanical Engineering | SCMS School of Engineering and Technology, India | *Graduated January 2021*

- GPA: 8.05 / 10

RELEVANT PROJECTS

Pharmacy BI Dashboard — *Python, Pandas, Matplotlib, Seaborn, Tableau*

- End to end sales analytics pipeline on 50,000+ pharmacy transactions: data quality checks, revenue verification, exploratory analysis, and interactive Tableau dashboards covering branch performance, product profitability, customer demographics, and payment flow visualisation.

Analytics MCP Server — *Python, PostgreSQL, dbt, Apache Airflow, Apache Kafka*

- Built a Model Context Protocol server exposing internal analytics data to AI coding tools via stdio; backed by PostgreSQL with raw and analytics schemas, dbt for incremental transformations, Airflow for nightly DAG scheduling, and Kafka for real time event ingestion.

MediClaim AI — *React, TypeScript, ASP.NET Core, PostgreSQL, FastAPI, Semantic Kernel*

- Full stack AI assisted insurance claims platform featuring PDF upload and extraction, RAG based question answering over policy documents, rule based risk classification of claims (high, medium, low), JWT authenticated REST API, and a dashboard with document and claim analytics.

CERTIFICATIONS

- AWS Certified Machine Learning Specialty (in progress, target December 2026)
- Supervised Machine Learning: Regression and Classification | Coursera / DeepLearning.AI
